Experience

Servo IT Solutions

June 2025 - Present

Junior Backend Developer

- Engineered RESTful APIs using Node.js, Express, and MySQL, across multiple cloud-based systems, by optimizing SQL queries and API endpoints, reducing average response time from ~200ms to ~120ms.
- Orchestrated client-side features with React, Redux Toolkit, and MUI by using reusable components and selective cache revalidation, cutting duplicated code by ~45% and improving UI performance by ~60%.
- Automated end-of-day financial reconciliation by integrating the HMS (Hotel Management System) and POS (Point-of-Sale) systems directly into the accounting system, eliminating the need for manual entry.
- Collaborate within Scrum teams to decompose user stories into shippable increments, maintaining a 95%+ on-time delivery rate while resolving high-priority end-user support tickets.

Trackerteer Web Developer Corporation

Nov 2024 - Jan 2025

Web Developer Intern

- Developed a full-stack admin dashboard for a food delivery platform using React.js and Laravel, enabling real-time management of orders and rider data.
- Enhanced performance by migrating from client-sided filtering to server-sided pagination and search queries, and improved UI responsiveness with loading states and memoized data fetching.
- Developed 10+ reusable UI components (date pickers, tabs, timeline, maps integration) and implemented comprehensive error handling with custom 404 pages, URL validation, and user authentication flows.

Education

Holy Angel University

June 2021 - April 2025

Bachelor of Science in Computer Engineering

- Best in Thesis Documentation
- National Qualifier of the 8th CPE Challenge: Robothon Competition
- President's Lister & Dean's Lister

Personal Projects

Gastos

Next.js | TypeScript | Tailwind | MySQL | TanStack Query

- Built and deployed a full-stack Progressive Web App (PWA) for personal budget tracking, featuring transaction logging, Google oAuth, Sessions Management, and multi-account support.
- Leveraged TanStack Query to implement client-side caching and optimistic UI updates, reducing visible latency and eliminating unnecessary network requests.

AI-Ponics

React | Firebase | Gemini | Blynk | OpenWeather

- Engineered an integrated sensor monitoring system and web application to optimize aeroponic tower operations via real-time data visualization and proactive alerts.
- Fine-tuned Gemini 2.5 Pro for an AI chat assistant with image analysis, a custom knowledge base, and context-aware responses that ingest live sensor readings and weather data.

Skills

Languages: JavaScript, TypeScript, HTML5, CSS

Frameworks & Libraries: React, Next.js, Express, Node.js, Redux Toolkit, Zustand, TanStack Query

UI Libraries: Material UI (MUI), ShadCN, Tailwind

Databases & Backend Services: Firebase, Supabase, MongoDB, MySQL, PostgreSQL

Version Control & Collaboration: Git, GitHub, Azure, TortoiseSVN
